

Kunjun Shu

CONTACT INFORMATION	Fudan University Shanghai, China Kunjun Shu's { Personal Homepage / Github / Zhihu / Technology Blog }	kjshu22@m.fudan.edu.cn
RESEARCH INTERESTS	Design science research at the intersection of information systems, large language models (LLMs), agentic AI, and statistical modeling.	
EDUCATION	Fudan University , Shanghai China B.S. in Statistics and Data Science , GPA: 3.85 / 4.00 • Coursework: <i>Regression Analysis (A+)</i> , <i>Operations Research (A)</i> , <i>Data Structure and Algorithms (A)</i> , <i>Statistical Computing (A)</i> , <i>Statistical Inference (A)</i> , <i>Categorical Data Analysis (A)</i> , <i>Python Programming (A)</i> , <i>Econometric (A)</i> , <i>Multivariate Analysis (A)</i> , <i>Mathematical Analysis (A)</i> , <i>Probability Theory and Mathematical Statistics (A)</i> , <i>Sampling Survey (A)</i> .	Expected 2027
HONORS AND AWARDS	The 2nd Prize Scholarship (ranked 27) The 3rd Prize Scholarship (ranked 30) The 3rd Prize (Shanghai) CUMCM (Contemporary Undergraduate Mathematical Contest in Modeling) The 14th and 15th National Mathematics Competition for College students: 2nd Prize (Shanghai)	
PUBLICATIONS	Accepted at PACIS 2026 (Pacific-Asia Conference on Information Systems), proceedings forthcoming. <i>Extent-Med: A Dynamic Decision-Making Approach under Incomplete Information for Community Healthcare</i> with Wenwen Li .	
WORKING PAPERS	Now, I am working with Wenwen Li and Michael C.L. CHAU on a paper: <i>SEADS: An Uncertainty-Driven Framework for AI-Based Medical Consultation</i> .	
RESEARCH EXPERIENCE	Research Assistant Supervised by Wenwen Li , I have developed an AI Agent (AI Medical General Doctor, AIMGD), whose target is to leverage Large Language Models (LLMs) to optimize patient-provider communication. The project has undergone preliminary trials in several community hospitals. More information is available on the website: link . • Designed and implemented a kernelized information von Neumann entropy gain algorithm with a Katz kernel in graph structure to mine core symptoms. • Applied FastAPI framework and asynchronous programming to improve performance.	<i>AI Medical General Doctor, AIMGD</i>
OTHER EXPERIENCE	Teacher Assistant I served as a Teacher Assistant (TA) for the course <i>Introduction to Data Structure and Algorithms</i> (by Zibo Liu), assisting in grading assignments and providing feedback to students.	<i>Spring 2026, Fudan</i>
PROJECTS	Binary Classification Model based on Chest CT Images With MaxPooling for dimensionality reduction, applying Logistic Regression with LASSO regularization, the model achieved an accuracy rate of up to 98.30% on the test dataset (demonstrating comparable performance to CNN while using much fewer parameters).	[Code]

CIFAR-10 Classification (ResNet18)

[Code]

Applying ResNet18 pre-trained model, I established a classification for CIFAR-10, with accuracy rate 0.76750 in [Kaggle competition](#).

Stock prediction model based on neural network LSTM

[Code]

Applying LSTM, I developed a Stock prediction model based on neural network LSTM (rnn-quant GitHub 23 stars).

Data-Driven Business Decision Platform

[Code]

Developed a Data-Driven Business Decision Platform using Python and Django, focusing on applying fundamental data structures and algorithms to optimize system performance.

Some Notes

I am sharing some notes at my blog [isKage'Blog](#) and [Zhihu](#)

- Building Neural Networks with PyTorch: [Blog link](#) or [Zhihu link](#).
- Data Structure and Algorithms Notes: [Blog link](#) or [Zhihu link](#).
- SQL Notes: [Blog link](#) or [Zhihu link](#).
- R Programming Notes: [Blog link](#) or [Zhihu link](#).
- Statistical Computing, Optimization Algorithms (Python Implementation): [Github link](#).

COMPUTER SKILLS

- Programming: Python (PyTorch, Pandas, Numpy), R, C
- Database Management: SQL, MySQL
- Web & API: FastAPI, Django, HTML, CSS
- Applications: Conda, Git, $\LaTeX$, Markdown
